

This Document will serve as a guide to customizing the code to your liking such as: Editing the courses, Editing the background, linking your spreadsheet, adding your email for assignment due date reminder, etc.

For index.html:

How to Change the Background Image:

1. **Locate the Background Section in `index.html`:** In the `<style>` section of the HTML file, find the `body` tag where the background image is specified:

```
body {  
    margin: 0;  
    padding: 0;  
    background-image: url(''); /* EDIT: Replace with your own background  
image URL */  
    background-size: cover;  
    font-family: 'Montserrat', sans-serif;  
    color: #000;  
}
```

2. **Replace the Image URL:** To change the background image, replace the existing URL with your own image's URL. If you have a local file, upload it somewhere accessible (e.g., Google Drive, GitHub) and paste the new link in place of the current one.

Example:

```
body {  
    background-image: url('https://yourwebsite.com/yourimage.jpg');  
    background-size: cover;  
}
```

3. **Optional Adjustments:** If you want to modify how the background fits, you can adjust the `background-size` property (e.g., `contain`, `100% 100%`).

How to Change the Courses:

1. **Locate the Courses Dropdown in `index.html`:** In the form section, find the dropdown list for courses:
2. **Add or Remove Courses:** To customize the courses, you can edit the `<option>` tags. Add new ones or remove any that don't apply.
 - a. **Example (if you want to add a course called "MATH301"):**
 - i. `<option value="MATH301">MATH301</option>`
3. **Maintain Consistency:** Ensure the values inside the `value` attribute are unique and match the names of the courses you want to track.

How to Link Your Spreadsheet to the Iframe Section:

1. **Find the Iframe Section in `index.html`:** Look for the iframe where the spreadsheet is embedded:
2. **Copy the URL of Your Spreadsheet:** Open your Google Spreadsheet, click on the "Share" button, and ensure that the link sharing is set to "Anyone with the link." Copy the URL from the address bar.
3. **Replace the Iframe's URL:** Paste your spreadsheet's URL into the `src` attribute of the iframe tag, replacing the current link.
 - a. Example: `<iframe src="https://docs.google.com/spreadsheets/d/your-spreadsheet-id/edit#gid=0" width="500px" height="500px" frameborder="0"></iframe>`

For Code.gs:

How to Edit the Number of Days Before Starting to Send Reminder Emails:

1. **Locate the `addDailyReminders` Function:** In your `Code.gs` file, find the function `addDailyReminders`. This function checks if assignments are due within a specific number of days and sends reminder emails accordingly.
2. **Adjust the Days Before Reminder:** In the `addDailyReminders` function, the number of days before the reminder is sent is controlled by the following line:
 - a. `if (daysDiff <= 4 && daysDiff >= 0) {}`
3. **Change the Number of Days:** The `<= 4` part means the reminder is sent if the assignment is due within 4 days. To change this, replace `4` with your desired number of days.
4. **Example (send a reminder 7 days before the due date):**
 - a. `if (daysDiff <= 7 && daysDiff >= 0) {}`

How to Edit Your Email for Reminders:

1. **Locate the `sendReminderEmail` Function:** Find the function `sendReminderEmail` in your `Code.gs` file. This function sends an email reminder about upcoming assignments.
2. **Edit the Recipient Email:** The recipient of the reminder emails is controlled by the `recipientEmail` variable. Change the placeholder email (`"youremail@example.com"`) to your preferred email address.
3. **Save Your Changes:** Once you've updated your email address, save the `Code.gs` file.

Notes:

- After making any edits, you can test them by clicking the Deploy button in the top-right corner of the editor, selecting Test Deployment, and then using the Web App link.
- Once you're satisfied with your changes, create a new deployment by following the steps from the setup process. Be sure to provide a new description, execute it under your account, and set it to be viewable only by you.
- Remember, old versions cannot be deleted, but you can archive them to prevent future use.
- To ensure quick and easy access, bookmark the new Web App link after deployment.
